PROFESSIONAL SUMMARY

Frontend Engineer with **2+ years** of experience building scalable, world-class web applications using **React.js, TypeScript, Redux Toolkit, Tailwind CSS, and JavaScript (ES6+)**. Strong foundation in **object-oriented programming**, component-based architecture, design systems, and **accessibility (a11y / WCAG)**. Improved **Core Web Vitals** and reduced page load time by **40%** via memoization and code-splitting; cut delivery time by **30%** using **AI-assisted development workflows** (Claude Code, GitHub Copilot) and **prompt engineering**. Experienced in **Agile/Scrum** environments with strong cross-functional collaboration and **CI/CD** delivery practices.

TECHNICAL SKILLS

- **Frontend (Primary):** React.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, React Hooks, Component-Based & Micro-Frontend Architecture, Responsive UI, Dynamic Forms, API Integration, Accessibility (a11y, ARIA, WCAG)
- **State Management:** Redux, Redux Toolkit (RTK), React Query / TanStack Query, Zustand, Context API
- **UI & Design Systems:** Chakra UI, Tailwind CSS, Storybook, Design Tokens, Reusable Component Libraries
- **Performance:** Core Web Vitals (LCP, FID, CLS), Lighthouse Audits, Memoization, Code-Splitting, Lazy Loading, Bundle Optimization
- **AI & Prompt Engineering:** Prompt Engineering, GPT-based Search, AI Output Evaluation, Claude Code (Anthropic), GitHub Copilot, AI-Assisted Development Workflows
- **Backend (Supporting):** Node.js, Express.js, RESTful APIs, WebSockets, Role-Based Access Control (RBAC), Cron Jobs, MongoDB (Aggregation Pipelines, Data Modeling)
- **Testing, Build & DevOps:** Jest, React Testing Library (RTL), Unit & Component Testing, Vite, Webpack, Git, GitHub, GitHub Actions (CI/CD), Vercel, Agile/Scrum, Code Reviews, Postman

EXPERIENCE

Frontend Engineer (Full Stack), Unthinkable Solutions

India | Jan 2024 – Present

- Developed and shipped **React.js + TypeScript** web components with dynamic forms, full-screen UI workflows, and complex AND/OR/NOT filtering; improved **Core Web Vitals (LCP, FID, CLS)** and reduced page load time by **40%** using `useMemo`, `useCallback`, `React.memo`, code-splitting, and lazy loading.
- Delivered customer-facing features for a platform serving **200+ users across 5 organizations**; partnered with Product, Design, and Backend teams in **Agile/Scrum** sprints with bi-weekly deliverables.
- Built and maintained a **UI Design System** using **Chakra UI**, **Tailwind CSS**, and **Storybook** with reusable components, design tokens, and **accessibility (a11y / WCAG)** guidelines; adopted **Redux Toolkit (RTK)** and **React Query / TanStack Query** for predictable state and efficient server-state caching.
- Wrote clean, maintainable **TypeScript** across critical modules, reducing runtime errors; authored unit and component tests with **Jest** and **React Testing Library (RTL)**; participated in **code reviews** and mentored junior developers.
- Leveraged **prompt engineering** with **Claude Code** and **GitHub Copilot** for **AI-assisted development workflows** (reduced delivery time by **30%**); contributed to **CI/CD** pipelines using **GitHub Actions** and **Vercel** for automated builds, previews, and deployments.
- Developed supporting **RESTful APIs** (Node.js, Express.js), **WebSocket**-based real-time features, and **MongoDB aggregation pipelines** that auto-generated document-based (Excel) reports for business analytics.

PROJECTS

Healthcare Management Platform — Full Stack Web Application

Company Project

- Delivered a full-stack web platform for **200+ users across 5 hospitals** with dynamic dashboards, appointment scheduling, and **role-based access control (RBAC)** for admins, doctors, and staff.
- Achieved **40% faster page loads** and improved **Core Web Vitals** via React memoization, code-splitting, and lazy loading; implemented **WebSocket**-based real-time updates and cron-driven automated document (Excel) report generation.

Netflix-GPT — AI-Powered Movie Search Application

Personal Project

- Built a Netflix-style React app with **GPT-powered semantic search** that returns AI-curated movie recommendations from natural language queries; applied **prompt engineering** techniques to improve relevance and consistency of AI outputs.
- Implemented **Redux Toolkit** for global auth and browse state; optimized re-renders using `React.memo` and selector patterns. Iterated on prompts and evaluated outputs using structured feedback loops to refine accuracy.

Social Media Learning App — React Component Library & REST APIs

Personal Project

- Built a full-stack social platform with **JWT-based authentication**, post creation, likes, follows, and a dynamic news feed powered by REST APIs.
- Designed a fully reusable **React component library** (cards, modals, forms) using **Chakra UI** and **Tailwind CSS** with design tokens and theming for a consistent, **accessible (a11y / WCAG)** UI.

EDUCATION

Master of Computer Applications (MCA) — GLA University

Mathura | 2022 – 2024

Bachelor of Computer Applications (BCA) — Rajiv Academy

Mathura | 2019 – 2022
